Open the Network menu (AirPort), and click on the **Advanced** button.
In the AirPort tab choose the **Cornet-EAP** network from the ‘Preferred Networks’ drop-down menu. The checkbox before the ‘Remember networks this computer has joined’ label has to be checked.
In the **TCP/IP** tab choose the ‘Using DHCP’ option from the ‘Configure IPv4’ drop-down menu and the ‘Automatically’ option from the ‘Configure IPv6’ drop-down menu.
In the **802.1X** tab fill the ‘User Name’ and the ‘Password’ field with your own **CUSMAN** data. In the ‘Authentication’ list check the checkbox before the PEAP option. Make sure that none of the other options are checked. From the ‘Security Type’ drop-down list choose the **WPA2 Enterprise** option, then click the ok button.
In the Network window choose the **Cornet-EAP** for ‘Network Name’.
That’s all, you’ve done. In the ‘Network’ window, you can see, that your device is now connected.
