Research, professional activity

Major taught courses or fields of education:

Colleague CV: Dr. Jackson Kevin Michael

Consumer Behavior, Entrepreneurship, Services Marketing

Field of science and discipline:

media and communication sciences

Current fields of research:

Consumer Behaviour, Food Insecurity

Previous fields of research:

Student Burnout, Impact of COVID-19 on Higher Education

Major research projects

- 2023 - 2026, Inflation, food insecurity, and mental health: Generation Z's burden in emerging Europe.
Form of participation: leader of the research team
Moneylender:
Further info about research: The published study shows how inflation is linked to food insecurity and poorer mental well-being among Gen Z in Hungary. The new qualitative study explores how young people cope, adapt, and make trade-offs under ongoing financial pressure.
- 2024 - 2026, The power of personalization: Generation Z's emotional response to AI food marketing under the EU AI Act.
Form of participation: leader of the research team
Moneylender:
Further info about research: This study examines how Generation Z responds emotionally to AI-generated food advertising compared with traditional ads. It connects these behavioral effects to the EU AI Act by asking when personalized food marketing may move beyond engagement and
- 2025 - 2026, Temporal Engagement Architecture in Traditional versus AI-Enhanced Food Advertising
Form of participation: leader of the research team
Moneylender:
Further info about research: This research explores how AI-enhanced and traditional food ads shape attention over time. It introduces Temporal Engagement Architecture (TEA) to examine how quickly attention is captured, how deeply viewers engage, and how stable that engagement re
- 2025 - 2026, Autonomy Compression in Agentic AI Systems: Delegation Across Hedonic and Utilitarian Decisions
Form of participation: leader of the research team
Moneylender:
Further info about research: This study explores how agentic AI can reduce user oversight by making decisions easier to approve than to verify. It compares delegation behavior in hedonic and utilitarian tasks to see when AI support helps and when it may weaken autonomy.
